

The **GENEROSITY FACTOR** is the average percentage of the income that the members of a given church or field have given as their **PROMISE** (regular and systematic offering).

## CALCULATING THE GENEROSITY FACTOR

1

Choose a region (Church, Mission, Conference or Field) and the period to be measured.

2

Multiply the **TOTAL TITHE (A)** of this period by 10. The result will be the **TOTAL ASSUMED INCOME (B)**.

3

Divide the **TOTAL OFFERINGS (C)** (All Categories) by **(B) TOTAL ASSUMED INCOME** (See Above).

4

Multiply the **RESULT (D)** above by 100 to get the percentage.

5

The final result is the **GENEROSITY FACTOR (GF)**.

### EQUATION

$$(A) \text{ _____ } \times 10 = (B)$$

$$(C) \text{ _____ } \div (B) \text{ _____ } = (D)$$

$$(D) \text{ _____ } \times 100 = \text{GF } \text{ _____ } \%$$
